

Solutions for Migrating Messaging and Collaboration Platforms

Exchange to Exchange Mail Migrations

E2E Complete is Binary Tree's software for automating Exchange migrations and managing Exchange environments. With advanced technologies, such as Microsoft Silverlight for the Administrative Dashboard, E2E Complete provides centralized management over the entire migration process, with built-in user communications and migration event scheduling, plus complete status reporting and forecasting for the project.

- Upgrade from Exchange 2003/2007 to Exchange 2010
- Perform Cross-Forest (Inter-Org) Migrations
 - Consolidate Exchange Servers for Upgrades, M&A, and Infrastructure Consolidation Initiatives
 - Segregate Exchange Systems for Divestitures
 - Supports Directory Synchronization and Free/Busy Calendar Lookups
- Migrate to Microsoft Office 365 and Manage Hybrid Deployments

Notes to Exchange Mail Migrations

Binary Tree provides solutions for migrating from Notes to Exchange on-premises, Exchange Online in Microsoft Office 365, and to hybrid deployments. Binary Tree supports traditional on-premises migrations with CMT software for establishing seamless interoperability between Domino and Exchange, and for migrating mailboxes and calendars. In addition to the traditional on-premises migration approach, Binary Tree also supports Remote Managed Migrations (RMM) and Remote Hosted Migrations (RHM) where Binary Tree, or an authorized partner, perform the migration remotely.

- Coexist with Domino and Exchange with CMT for Coexistence

Notes to SharePoint Application Migrations

Binary Tree provides a suite of software solutions for dramatically reducing the complexity, risks, costs and effort of transforming legacy applications to Microsoft SharePoint.

With **CMT Inspector**, the legacy application environment can be thoroughly inspected and analyzed to properly separate applications by usage, business value, and by the complexity of their business logic and data. Custom applications are further evaluated based on the most complete and up-to-date information about their content, design, and business logic collected during inspection to make recommendations for the transformation approach and platform target.

To enable your Microsoft Outlook users to continue to interact with Notes mail-enabled applications, establish application coexistence between Domino and Exchange with **CMT for Coexistence with ZApp (Zero-touch Application Remediation)**. This robust solution preserves the ability of your Outlook users to perform actions embedded into emails received from Notes applications.

Subsequently, applications based on standard templates can be migrated to their functional equivalents in the new SharePoint infrastructure with **CMT for SharePoint**.

As the applications are transitioned off of the legacy platform, the footprint of the platform itself can be continuously decreased with **Domino Consolidator**. This effort reduces the costs of maintaining the legacy platform and increases the ROI of your transformation initiative.

- **Analyze and Rationalize Notes Applications with CMT Inspector**

The Only Option for Migration Success

Binary Tree has migrated over 25 Million users for over 6,000 customers around the world. And that includes migrating over 2 million users to Microsoft Office 365. Our software has been used in many of the largest mail migrations in the world. Here's a small sample of the customers that have relied on Binary Tree.

"In a five month timeframe, we migrated roughly 30,000 people, without impacting their business, without interrupting their day to day operations, to a hosted environment."

Esat Sezar, CIO, Coca-Cola Enterprises

"We have decided to use Binary Tree tools to migrate Lotus Notes customers to the Microsoft cloud."

David Scult, General Manager, Microsoft Office 365
