

Seamlessly Collaborate between IBM and Microsoft

It can be a challenge to maintain the robust level of performance from when you first use Notes Integration | CMT to integrate Domino and Microsoft Exchange or Office 365. Our software relies heavily on the configuration of your Domino and Exchange messaging systems, as well as on related IT systems. So changes can delay or stop syncs, impact Notes applications, and overwhelm your IT support. With Notes Integration Assurance, you get a health check of your integration and coexistence infrastructure either once or twice a year. These periodic checks help keep your integration performing at its best. They can help make sure that your tools don't slow or stop, which keeps your organization productive. During the health check, Binary Tree experts will review all open support issues, audit your system, review any upgrades, check feature setup, and report on findings.

Notes Integration Assurance makes sure that your Notes/Microsoft coexistence is operating optimally.

CHECK

Inspect environments completely

- > Full Integration environment audit
- > Yearly or bi-annual reviews – remote or on-site
- > Check configurations, directory systems, mail routing, calendars, integration and more
- > Health check report and recommendations

IMPROVE

Enhance integration performance

- > Review open support issues
- > Review setup and configurations
- > Report findings and recommendations for performance improvement
- > Remove roadblocks to collaboration

COLLABORATE

Benefit from optimized coexistence

- > Improve calendar access and Free/Busy transparency
- > Find coworkers and team members faster for better communication across the organization
- > Peace of mind in knowing your integration is operating at top performance
