Powering Enterprise Transformations®

Enhanced Microsoft Office 365 FastTrack Migrations

The Microsoft Service Description of the FastTrack Center (FTC) delivers a well-defined onboarding and mailbox migration solution for transitioning legacy environments to Microsoft Office 365. Binary Tree is fully aligned with the FTC deliverables and complements the FTC to further accelerate the deployment and usage of Microsoft Office 365 where FTC capabilities are not available. The chart below provides an overview of the Microsoft FTC onboarding and migration process, the services that the FTC provides, and the supplemental solutions provided by Binary Tree.

The Microsoft Office 365 FastTrack Onboarding & Migration Process*

	INITIATE	ACCESS	REMEDiate	ENABLE	DATA MIGRATION
Microsoft Migration Services for Microsoft Exchange	Kick-off meeting Discuss on-boarding Data verification	Remediation assessment Assist with remediation planning	Check source environment post customer remediation	Service provisioning Tenant & identity integration SMTP mail routing	Migration of: • Email, rules, delegates, contacts, calendar, tasks Migration of: • 90 days of email and calendars • Tasks, contacts, rooms & resources, mail files, distribution lists
Additional Services for IBM Lotus Domino					
BINARY TREE Powering Enterprise Transformations® Solutions for Binary Tree & Binary Tree Partners to supplement Fast Track migrations from Microsoft Exchange	Consecutive guidance: • Coexistence requirements • Migration requirements	Assessment for: • Active Directory • Microsoft Exchange & public folders	Remediation for: Active Directory Exchange mail	Full Exchange-to-Office 365 coexistence: Calendar workflow Free/busy lookups	Full migration of: Public folders Tenant-to-tenant Hosted-to-Tenant
Solutions for Binary Tree & Binary Tree Partners to supplement Fast Track migrations from IBM Lotus Domino		Assessment for: • Active Directory • Domino directory • Domino mail	Remediation for: • Active Directory • Domino directory • Domino mail	Full Domino-to-Office 365 coexistence: • Mail interchange • Calendar workflow • Free/busy lookups • Mail Directory Sync • Uninterrupted workflow for email-enabled applications	Full migration of: • Mailbox • Local Archives • Hosted-to-Tenant

Note: In some cases, there are business requirements where coexistence between Domino and Office 365 is delivered as part of the overall FTC solution.

Binary Tree Solutions to Supplement FastTrack Migrations

Assessing Active Directory for an Office 365 Migration

There is often the need for Active Directory consolidation and remediation prior to on-board to Office 365. The Microsoft FTC offers guidance for Active Directory (AD) preparation and remediation guidelines, as well as checks the source directory prior to migration. To expedite customer preparation for Office 365 migration, Binary Tree offers two complete AD Domain and Forest assessment and migration solutions. Our Power365® Active Directory SaaS solution and our Active Directory Pro software allow customers to restructure AD, synchronize AD, and completely migrate to a new AD and be fully compliant for migration to Microsoft Office 365.

Assessing Microsoft Exchange/Lotus Notes for an Office 365 Migration

As organizations migrate to Office 365 there are many issues which need to be resolved to ensure low cost, on-time project completion. Often there is the business requirement for full messaging fidelity, or simply ensuring high end-user satisfaction during the coexistence and migration stage. Our Migration Assessment products will help identify the common user and directory issues that should be remediated to provide a seamless transition and adoption of the Office 365 service for end users. The Migration Assessment follows standardized guidance to ensure rapid deployment of Office 365 with minimal end-user impact.

Migrating Exchange Server and Exchange Public Folders

The Microsoft FastTrack center has well defined mailbox migrations to move high volume of data & mailboxes. If customers require the additional data set of Exchange Public Folders, or more granular control of the migration lifecycle and reporting, then Binary Tree solutions may be required. Administrators can maintain complete control of automating and managing migration projects with forecasting, scheduling, reporting, and user communication processes that are often required to performing a successful migration. Binary Tree can also support intra-org, inter-org (cross-forest), hybrid (on-premises and Microsoft Office 365 migrations), or full legacy to Microsoft Office 365 migrations.

Migrate between Microsoft Office 365 Tenants and From Hosting Providers

Migration to a Microsoft Office 365 tenant from another Microsoft Office 365 tenant, or a 3rd party hosted Exchange environment is outside the scope of the FTC offering today. Binary Tree offers a complete migration solution supporting multiple tenant to tenant migration scenarios. There are often complex business and technical requirements to address with 3rd party hosted migrations, and Binary Tree provides solutions to address all coexistence and migration needs in these scenarios.

Migrations from Domino to Office 365

Binary Tree has a long history of providing migration and coexistence technology for customers who are moving to Microsoft Exchange. For those organizations that are smaller in size, simple coexistence is sufficient as the Migration from Lotus Domino to Microsoft Office 365 can be achieved in a few days.

For larger organization, coexistence between both mail platforms during the migration is often a business requirement. Full coexistence ensures complete transparency between the two messaging platforms including full mail interchange, complete calendar workflow, bi-directional free/busy lookup, and continuous synchronization of mail directories.

There are often customer requirements for migration of the entire mailbox content, as well as that of local Notes archives is outside the scope of FTC. Binary Tree offers a full migration solution for the remaining content, and local archive migration to Microsoft Office 365.

In addition to coexistence and full mailbox migration, Binary Tree provides uninterrupted access to the workflow of mail-enabled Domino applications. This solution enables users who migrate to Office 365 to continue to use the legacy Lotus Notes applications, and therefore eliminate the need to re-write the Lotus Notes applications to modernized platforms.
