

# Unify your business under a shared directory

If your users can't find each other in the directory, it's hard for them to work together. Power365® Directory Sync can set up and maintain a sync across Active Directory or Azure AD environments, or even between Active Directory and Azure AD. Now, users in merging organizations can find each other in a shared address book. As cloud-based software, Power365 Directory Sync helps establish Day 1 productivity and collaboration for mergers and acquisitions. And it's flexible enough to adapt to even the most complex workflow scenarios. With Power365 Directory Sync, you gain synchronization and insight, all on the Power365 platform

**Power365 Directory Sync establishes a Global Address List from Day One – even for the most complex workflows.**

## DAY ONE

Global Address List

- > Built on Power365® Software as a Service for one-day installation
- > Establish a Global Address List from the first day of a corporate change
- > Keep users productive and facilitate collaboration

## FLEXIBLE

Adaptable and Configurable

- > Sync Azure AD, Active Directory, or even between both environments
- > Highly customizable to configure even the most complex workflows
- > Test the sync before it's run in production

## POWERFUL

Complete Synchronization

- > Detailed reports give insights before a sync
- > Reports accessible within the SaaS UI
- > Quickly identify and resolve conflicts
- > Sync attributes and passwords
