

Migrate Complex Domino Applications to Microsoft Azure

Binary Tree's Domino and Notes Application Migrator is an automated solution for migrating your custom Domino applications 'like-for-like' to modern web applications in the Microsoft Azure cloud while retaining 100% of their user interface, business logic, security, database schema and data. After being migrated, the applications can be launched by your end users from the Microsoft Office 365 portal and used without training as the new web applications are operated just like the legacy Domino applications.

Migrate custom Domino applications to Microsoft Azure while retaining 100% of the user interface and business logic.

The Legacy Application in Notes

The Migrated Web-Based Application in Azure

The migrated application has 100% of the user interface, business logic, security, database schema and data of the legacy application.
