Known Limitations 5.1

Notes Migrator | CMT (Notes Migrator) features a new name and logo, but is the same, trusted product previously known as CMT for Exchange (CMTe).

AWD\Configuration

- The Store Password feature does not validate the password, and will allow you store an incorrect password without prompting for a valid password when "Get Server List" is clicked. (16596)
- When a comma is used as a decimal separator in Windows, it can cause problems during the migration. (16610)

AWD\Migration Workstation

- If more than one instance of Lotus Notes or Notes Migrator is installed on a migration workstation, you will be prompted for the Notes password for each migration. (16688)

Calendar Migration

- "Description:" appears in the body of migrated calendar documents when viewed in Outlook Web Access. (16629)
- Attachments in migrated calendar entries may not appear in the same position as in Notes when viewed from Outlook. (16635)
- If an invitee of a migrated meeting is changed from Optional to Required, the invitee's name appears in both Optional and Required fields in OWA. This is not a problem in Outlook. (16650)
- Calendar entries with a repeat pattern of Every Other Year are not natively supported in Exchange, and are migrated as Yearly entries. (16654)
- When the migration setting to add Room, Resource and Online Meeting Place information to the body of Calendar entries is selected, and there is no Room, Resource or Online Meeting Place in the calendar entry, "See Details Below" is still added to the Location field. (16655)
- Subjects of Repeat Calendar entries that have carriage returns will not be displayed properly in Outlook and OWA 2007. (16659)
- Rooms and Resources added or removed to a Notes repeat meeting after the meeting was created will appear properly on each occurrence of the migrated meeting, but not the meetings series. (16663)
- Invitees added to a Notes repeat meeting after the meeting was created will appear properly on each occurrence of the migrated meeting, but not the meetings series. (16664)
- User values in the BCC field of a migrated calendar item will appear in the Resource field. This is because Exchange uses the BCC field for resources, so any names in the BCC field will be treated as a resource. If the location field is empty, Outlook will display the resources in the location field also (it assumes resources will be a room or online meeting place). (16669)
- If "Automatically adjust clock for daylight saving changes" on the "Date and Time Properties" dialog box is not checked, and/or the latest Microsoft DST patches have not been installed, multi-day calendar events that start in one Daylight Savings Time period and end in another will appear off by 1 hour during the Daylight Savings Time period in which they were not created. (16685)
- If a migrated calendar item and a regular mail item are both selected and moved to a folder, a new message window is opened instead of moving the messages to the folder. (16707)
- Migrated recurring calendar events, where invitees have been added or removed from single instances will not list the correct attendees on the Chair Person's calendar. However, the invitees' calendars are correct. (16713)
- A migration crash can occur with an excessive amount of data (over 50 entries) in the Location and Rooms fields. (16717)
- Enterprise Vault links in Domino calendar items are missing after migration. (16758)

- Meetings with nonstandard time zone with region/city such as "Z=-8\$DO=0\$ZX=190\$ZN=Asia/Shanghai", will not migrate to the correct time. (16769)
- The "Calendar Age Limit" filter causes all calendar items be added to message history whether they are migrated or not. (16803)
- Calendar items that do not have a start or end date causes a migration failure. (44404)
- Notes calendar entries' High Importance property does not get migrated to O365. Migrated calendar entries will be migrated as Normal importance. (57585)

Calendar Migration\All Day Events

- The 'Mark Private' option in a recurring all day event is not maintained on each occurrence of the event when viewing from OWA. The Mark Private option is properly maintained when open the series in OWA or when using the Outlook client. (16620)
- Attachments in recurring calendar events will not appear in OWA if all instances of the meeting were rescheduled prior to migration. (16638)

Calendar Migration\Anniversary

- Repeating anniversaries do not display on the correct date when viewed from Outlook Web Access. (16607)
- The gray information banner, at the top on a migrated recurring anniversary, displays the recurrence pattern as daily instead of annually, however is appears correctly on the calendar and series documents. (16609)
- The Play Sound reminder option in Lotus Notes Calendar items does not migrate to Outlook. (16618)
- Lotus Notes Anniversaries with the 'Pencil In' option selected are migrated to Outlook with a Show As: Free, instead of Tentative. (16625)
- The Mark Private setting on nonrecurring Anniversaries (only) is not maintained after migration. (16652)
- Reminder sound notification is not maintained on a non-repeating Anniversary after migration. (16653)
- Nonrecurring Anniversaries are not visible via OWA. (16656)
- Nonrecurring anniversaries are not removed by the removal job. (16671)
- A recurring anniversary series that has been modified will appear on the correct day(s), but the dates displayed in each occurrence reflect the original date. (16687)
- Location and Category fields are not migrated in Anniversaries. (16712)
- Birthday and Anniversary data for local contacts are not added to the Outlook Calendar. (45182)

Calendar Migration\Delegation

- If an invitee delegates one or more instances of a repeating meeting to someone else and the chairperson then updates the meeting, the entire series will appear on the original invitee's calendar post migration. (16798)
- If an invitee delegates one or more instances of a repeating meeting to someone else and that person does not accept the delegated invitation prior to migration, it will appear on their calendar as if it had been accepted post migration. (16799)
- The number of accounts that can be excluded from the Delegate audit is limited to 20 entries. (29154)

Calendar Migration\Meetings

- A migrated recurring meeting cannot be cancelled by an Outlook 2007 client. (16603)
- Updating the category field of a Lotus Notes meeting is not supported. Outlook does not support category exceptions. (16608)
- Embedded images in calendar entries appear as attachments in migrated calendar documents. (16614)

- The chairperson of an unaccepted meeting appears in the Required field after migration. (16627)
- Address translation does not occur for calendar documents migrated to a PST file. (16630)
- When removing the One and Only Attendee from All occurrences of a Meeting, the attendee remains after migration. (16649)
- Responses from attendees added after the original invite is issued do not update the chair's calendar tracking status. (16675)
- With the setting "Process meetings with no end date using ICAL information" set to yes, meetings with no end date sent from Outlook to Notes do not migrate properly if updates/reschedules have been accepted in Lotus Notes. (16676)
- Meetings with No End Date, originating outside of Notes, do not migrate properly when option "Process no end date meetings with ICAL information" is set to NO. No End Dates in Notes are created as a 530 occurrence custom list meeting. There is no repeat pattern information in the Notes document. The Original ICAL field does contain repeat information, but when the option is set to NOT use ICAL we have no repeat pattern. (16677)
- The recurrence summary line displayed in Outlook/OWA will display incorrect series start/end/repeat information for meetings created in Notes as a Custom List Meeting. The actual calendar entries/occurrences display correctly. (16678)
- The description that has been updated on a recurring meeting with pattern that moves or deletes on the weekends will not be updated post migration. (16679)
- A Notes user who accepted a meeting request for a repeat meeting (reoccurring Daily or every <number> of days with no end date) that was created in Outlook, and then migrated to Exchange, will not be able to view the accepted meeting in OWA. (16683)
- Changes to migrated meetings with Rooms and/or Resources are not updated in the Domino Resource Reservations database. Updates are not properly made in the Notes Rooms and Resources database if a one-time meeting or reoccurring meeting is cancelled in Outlook. Additionally, updates are not properly made in the Notes Rooms and Resources database if individual occurrences are cancelled or rescheduled in Outlook. (16698)
- If an occurrence of a migrated repeating meeting is changed by the migrated chair in Exchange, it does not appear correctly on the calendar of Invitees that were added after the original meeting was created. (16699)
- When migrating Custom List meetings or No End Date meetings, the calendar child document was being opened in preparation for looking for ICAL repeat information even when the option to Use ICAL for Repeat Info was disabled. The unneeded opening and closing of the child docs causes a slowdown, especially when using a remove Domino server. (16719)
- All occurrences of a recurring meeting aren't visible in OWA when rescheduling future and previous instances. (16727)
- Comments added during a reschedule to a single occurrence meeting will not appear in Outlook if the original meeting was not accepted prior to migration. (16729)
- Required attendees and resource do not show up in a printer output of the meeting with a migrated meeting. Native meetings created in Outlook show this information in the printed output. (16741)
- Meetings and Appointments in Notes that have the choice "Mark Available" checked are listed as "Tentative", instead of "Free", when migrated to Exchange. (16757)
- A meeting identified as a repeating meeting, but contains no repeat pattern, will not migrate the remaining events if one of the events has been cancelled. The meeting will be listed in the log as being skipped because it was cancelled, when in truth, only one of the occurrences was canceled. (16766)
- A table located in the body of a meeting is not migrated properly. (16767)
- Unknown time zones display the incorrect time even though the meeting is on the calendar at the proper date and time. (16778)

- The Response Status is not cleared when a critical change (date/time/location) is made by the chair after the invitee has accepted the original meeting. When the chair invites, the invitee accepts, the chair changes the date, and then migration occurs, the migrated calendar event will contain the invitee response to the original invite, even though it is not invalid/obsolete due to the date change. The date change notice will migrate correctly, and later responses will correctly update the chair tracking. In the time between migration and the invitee responding to the change, the chair tracking will continue to show the invitee as accepted even though the change has been issued. (16791)
- Monthly meetings scheduled for more than one day or date a month are not supported by Exchange and are not migrated. An error log entry is generated for these calendar items and migration continues with the next item. (16792)
- The word "Tentatively" is missing from the banner on a migrated tentatively accepted meeting. (16800)
- Notes Migrator does not recognize the "America/Chicago" time zone label set by the Lotus Notes client on a Mac resulting in wrong times for repeating meetings. (16809)
- If the entire series of a repeat meeting was rescheduled prior to migration, changes post migration will generate an NDR. (16813)
- If the chair of a meeting cancels an instance of a recurring meeting prior to migration by using the 'Delete' key, Domino deletes the child document from the database. Since the child document is missing, Notes Migrator will use the original pattern during migration, and the canceled meeting will appear on the calendar in Outlook. To avoid this, the canceled meeting(s) instances should not be deleted from the source database. (16823)
- Migrated meeting invitations that are unread in Notes are not displayed in the OWA calendar until after they are viewed post migration. (21865)
- Executable (.COM;.EXE;.BAT;.CMD;.VBS;.VBE;.JS;.JSE;.WSF;.WSH;.MSC) and consumable (.PST) attachments to calendar items are delayed when migrating. Items appear approximately 30 to 45 minutes after migration completes. (41359)
- When an all day, repeating event is rescheduled in Notes before migration, the reschedule dates are not applied in Outlook. The original all day event dates are used except for the first booking in the series. (41856)

Calendar Migration\Reminders

- Updates to the description of a repeating Reminder are not present after migration. (16626)
- Tasks/Todos, Notices (invites and updates) that have reminders and Messages that have a follow-up/reminder set will cause many past due pop-up reminders in outlook after they are migrated. Clicking the "dismiss all" button will resolve the issue. (16705)
- Because there is no equivalent in Outlook, Reminders migrate as appointments with the free time blocked out. (16771)
- Due to Exchange not handling a large number of exceptions well, during a migration, Notes Migrator will not create more than 200 exceptions for an event. Any exception beyond the first 200 will not be applied, and this may show as updates/reschedules/additions/cancels/etc. not appearing on the later occurrences. (37682)

Contact Migration

- Migration of personal NAB nested groups causes delivery failure for Nested Groups. (16594)
- Migrating Personal Groups with internal Notes users creates delivery failures due to lack of "EX" value in 'Type' field. (16597)
- The data in the Location field of contacts is not migrated. The data in Address fields are not mapped properly, and will appear differently between Outlook and Outlook Web Access. (16633)
- Embedded graphics in Migrated Contacts are not visible in OWA. (16637)
- The Home Address is migrated into both the Home and Business Address of Contacts. (16647)
- The data in the Location field on the Business tab of a Lotus Notes contact does not migrate to the PR_Office_Location field in Outlook as expected. (16651)

- The entire Business Address is migrated to the City field in a Contact. (16658)
- If the member of a Personal Mail Group was copied from the Domino Directory (into the Personal Address Book), the members have invalid SMTP addresses with a Domain of "@unk domain" after migration. (16660)
- The Country Codes of Personal Addresses are not migrated in Contacts. (16662)
- Embedded files in contacts do not migrate. (16695)
- The IM Address in contacts does not migrate to Exchange. (16745)
- The contact's SMTP email address does not get migrated to Exchange when the 'InternetAddress' field is NULL, but there is a value in the 'MailAddress' field. (16750)
- When Contacts with a photo are migrated to Exchange, the contact photo is migrated to the "Notes" field as an attachment without an extension and not the contact field in the Exchange contact document. (16756)
- When migrated to Exchange, the friendly email address format is incorrect and results in an email delivery failure when used. (16764)
- Personal Contact non-primary email fields with a canonical format do not get translated to an SMTP address. (16781)
- The Blog Site field in a Notes contact does not migrate because there is no corresponding field in Outlook. (16782)
- The Contact Migration button will prompt to replicate when the user's mail file contains contact documents, and no contact documents in the user NAB. This message can be ignored. (16808)
- If both the "pager" field and "Mobile 2" field are entered for a contact, the Mobile 2 number is lost. (16839)

Delegation Permissions

- In hybrid Exchange installations (containing Exchange on-prem and Office 365), delegation access can only be set for users on the same system. (46138)

Discussion or Document DB Migration

- Lotus Notes stored forms and the content within the stored form may not be rendered properly after migration. (16794)

Encrypted Items

- If a Lotus Notes encrypted message is migrated with the parameter "Require decryption action and migrate into the body", but the document is not decrypted prior to migration, the recipient is duplicated in the To field. This will only occur the first time the recipient name is encountered. All subsequent messages will be migrated as expected. (16762)
- The decrypt agent introduced in version 3.5.1 does not set the encrypt field to 0 or remove it, so an audit run after the agent has been run still show documents as encrypted when they are not. (16814)
- For messages that are encrypted at the time of the migration, the From address is not translated and uses the address from the MIME header to stamp the message. Messages are migrated without the body due to encryption and the message is not able to be replied to since the From address has not been translated. (25661)
- An apostrophe (') in encrypted content body text does not correctly migrate. (29153)

Group Migrations

- Group Migrations should be done using Directory Sync Pro. (34459)

Installation

- File versions are not properly displayed in the C:\program files\binary tree\cmt for exchange\cmtmonitor\bin location. (29005)
- The .MSI installer does not check the workstation environment meets the minimum requirements, and does not install the missing components needed for a successful migration. (27624)
- Migration workstations cannot be uninstalled if the Migration Control Center cannot be contacted. (32941)

Logging

- If there is a failure reading the Modified Notes Table, Notes Migrator will now return a critical failure and cancel the migration. Previously it would return a successful migration with 0 documents processed. (16795)
- Migration summary of contacts does not count group documents. (34362)

Logging\Viewer

- Migrating with the log viewer open it can significantly decrease migration performance. (16672)
- Mail-in migration log files are linked the same as Notes Migrator Person Documents, at bottom for easy access (16818)

Mail Migration

- The subjects of migrated messages are not appended with "[BinaryTree Evaluation Copy]" when using an evaluation copy and the user is migrated more than one time. (16611)
- Font size properties within a migrated message are not maintained if the font size in Lotus Notes is not the default size. (16612)
- The color of text bullets is black regardless of the color of the text and bullets in the source document. (16624)
- Although the type of message to migrate is set to 'Mail Only' in the Migration Settings, Phone Messages still migrate and do not contain the correct formatting. (16628)
- The recipient of a message sent to one's self appears in the CC: field instead of the To: field of migrated messages. (16631)
- The text "Follow Up" is not present in the gray follow-up banner of the migrated messages when viewed in OWA. If there is no date associated with a follow up flag in Notes, the date and time the message was sent will appear in the gray follow-up banner of the message. (16634)
- The Follow Flag reminder time is 12 hours ahead after migration when viewed from Outlook. It is displayed properly in OWA. (16646)
- An embedded graphic in a migrated mail item is displayed incorrectly when opening the browser window minimized in OWA. (16657)
- If the Outlook client language is not English, end-user migrations to a PST will not work (please contact support for a workaround). (16673)
- When migrating phone messages, the 'spiral notebook' graphic that appears at the top of the phone message in Lotus Notes is migrated as an attachment. (16704)
- Archive migration currently only supports 5 archives per user. (16709)
- Follow Up dates associated with Follow Up flags do not migrate if the time field is not set in Lotus Notes. Furthermore, Follow Up dates and times only migrate if the Alarm is set in Lotus Notes. (16724)
- The "Sent" field in a previewed Draft in Outlook displays the Migration Date instead of "None". (16726)
- Lotus Notes Journal Entries migrate as a Memo in Outlook, instead of a sticky note. (16742)
- Migrated draft messages are not editable. Unable to resume editing or send a migrated draft message. (16743)

- Unable to move a migrated calendar item to a folder in Outlook. Moving this item creates a mail message addressed to the meeting Chair. (16744)
- The following error during migration causes mail messages to not appear in destination mailbox: ! Error: Failed to save changes in MimeToMapi Ox80040305 (16765)
- The bodies of messages containing winmail.dat files are not migrated, because they cannot be processed with MIME. (16777)
- Multiple PDF attachments in a single mail message, stored in the message as V4 attachment types, are not migrated across. An EML attachment is added to the email (file contains no content). (16786)
- Reservation Doclinks sent from the Rooms and Resources database migrate as database links. (16793)
- When an Office 365 validation check is performed and the folder destinations do not exist, an OLE: Automation object error occurs. (16815)
- Tasks migrated to Exchange 2016 mailboxes do not have the PR_CONVERSATION_INDEX_TRACKING property; however, this does not appear to impact the functionality of the task. (16824)
- A migrated message with a follow up flag does not include the Priority Status (FollowUpStatus) if the FollowUpText field is populated. (18388)
- The reply to and forwarded icons indicating that a message has been replied to or forwarded do not migrate. (20762)
- There is an issue migrating Notes email that is stored in a MIME CSS format where the message body is missing post migration. (25942)
- Messages with the follow up flags set to high priority/low priority are migrated without the follow up flags. (27553)
- Draft messages are not migrated if both the source and target are non-English. (28157)
- If local groups are copied with full hierarchical address formatting or if the local group is created using "/" as a separator character, the local groups are migrated with the Domino address. (30963)
- SMTP addresses do not support double byte character sets. (33652)
- The source file or progress bar does not display correctly if the migration is run from a staged replica of the Domino mail file and used the additional database tab to supply the source information. (33993)
- Submitting a migration job using the Schedule Migration option results in the worker not updating the controller to complete the job. (44627)
- Responses to conversation threads that occur after the first pass migration are not added to the conversation during subsequent migrations. (45603)
- The Remove Migrated data functionality incorrectly selects IPM.Schedule message class items for removal when the profile is intended to only select/remove Mail items. (55414)

Mail Migration\Attachments

- In OWA there is a redundant attachment in the preview mail when mail contains an icon. (16686)
- There is a 240-character limitation imposed by Lotus Notes on the full file/path name of an attachment. If this is exceeded, an error will occur and the mail message will not be migrated. (16690)
- There is a 100 Mb attachment size limitation for migration. (16696)
- Attachments without extensions in Mail and Tasks are migrated to Exchange as .dat files. (16703)
- Attachments in contacts are not displayed in OWA 2013, therefore migrated attachments in contacts are not displayed in OWA. They do function as expected when using an Outlook client. (16761)

Mail Migration\Delivery Options

- Mail "Return Receipt:" loses all information after migrating to Exchange. (16684)
- The advanced delivery option in Lotus Notes 'Replies to this memo should be addressed to' does not migrate to Exchange. (16714)

- If an unread message with a read receipt request is migrated to Outlook before being read, the read receipt is not sent to the sender when read in Outlook. (18275)

Mail Migration\Header Fields

- Migrated draft emails do not display the send to, cc and bcc fields in Outlook. (16689)

Mail Migration\Rich Text

- Bulleted lists with checkmarks, circles and squares are not migrated correctly and appear as filled in circles in Outlook. (16694)
- Form objects, such as buttons and hotspots with code, will not migrate. (16700)
- Hotlinks in tasks are not migrated. (16701)
- Migrations that contain double byte character sets may experience Rich Text formatting issues in the message body. The message content is migrated, but may not retain the font colors, bold, or indentations. (34322)

Mail Migration\Views/Folders

- Any folder name containing the word "Rules" (case sensitive) is not migrated to Exchange, however, the documents will be migrated to the Unfiled folder. (16644)
- Moving migrated items that contain a migrated meeting "acceptance" response to a folder in Outlook, Outlook creates a new message with the items now part of the e-mail body. (16718)
- The Migration profile choice to "skip folder" will not work if the folder has a leading or trailing space. (16779)
- When migrating to a PST running an Outlook client in a language other than English, Calendar, Contacts and the drafts folder migrate in English instead of the language being used. (16787)
- Accented characters in an unfiled folder name is not migrated properly. (42996)

Mail-In db Migration

- The Verify Database process does not report on mail-in databases. This will be fixed in a future release. (16710)
- Migration of Mail-in databases with a ":" in the name is not supported, and the Mail-in database should be renamed prior to migration to remove the ":". (16730)
- Domino Database names containing special characters, such as "&", cause a migration status of "Migration terminated abnormally" even though the migration was successful. (16759)

Match Users

- The 'Matches the selected users on the Exchange CAS server' setting does not function properly. You must use LDAP to match users prior to migrations. (16602)
- The Password field does not allow a space in the password when logging into the CAS Server administration ID in the Settings and Additional tab. (16604)
- When migrating to a PST the default file name of the PST is shortname-servername-mailfilenameandlocation instead of just the shortname (for resolved users). (16617)
- Users without a shortname get stuck in "pending" state. (16716)
- Users that have SMTP addresses starting with 'con.', for example 'con.test@mydomain.com' cause PowerShell matching to fail. (16796)
- If re-matching user accounts after an account has been deleted in Office 365, the original matching information is incorrectly used. (28502)
- In Notes Archive Migrator, if the archive documents generated need to be matched/re-matched, the Last Name field value will be updated for the first archive file. Documents for the second and forward will not be changed. (38119)

Migration Workstation

- The migration of a user with an ampersand (&) within the first name or last name will not send logs to the Migration Control Center. (17621)
- Outlook 2016 is currently not certified to be used with migration workstations. (20047)
- Migrations workstations with a double byte character set language pack installed crashes when starting migrations. (26681)
- Calendar entries are migrated in the wrong time slot or span two days when the migration environment is set to (UTC) Coordinated Universal Time. Changing the time zone to UTC+1 (London) resolves this issue. (47857)

MTCW

- When updating either a single occurrence meeting or any part of a repeating meeting, if the chair changes the time zone of the update, it may not be applied to the existing meeting, but may instead create a new entry on the calendar. (34256)

Name Translation

- Contact group (Distribution List) will translate to LegacyExchangeDN if matching SMTP address exists in source 'Full Name' field. Outlook Distribution Lists cannot contain LegacyExchangeDN. This will cause email delivery failures. (16784)
- Mail in Database Common name translation entry disappears or is missing from the Translation Table view when an SMTP address is added as the second entry to the fullname field in the translation record. (16807)

Notes Migrator.nsf

- When clicking the 'Migrate Users' action, in an empty Migrate view, the 'Select Migration Priority' dialog is launched instead of receiving the following error: "To run this agent you must have at least 1 document selected". (16616)
- The "Run Replica Comparison" agent does not function when a custom replication formula is used. (16819)
- Chinese character archives cannot be opened from the open link in the CMT Person Document. (33433)
- If an invalid password is entered in the Autodiscover Password setting, the Autodiscover process will prompt for a password when the migration begins. You must enter a valid password, check the box to remember these credentials and click OK for the migration to proceed. If you do not check the box to remember these credentials, the migration will end and not complete. (38838)

Notes Migrator.nsf\Configuration Settings

- When configuring migration of user for future time, you see "migration status is set to error for user XX: migratecmtuser failed in the status bar at the button of the Lotus Notes client; however, the user will migrate. (16600)
- Changing a migration to a High Priority job does not queue the user on the next available workstation. (16691)
- There are two Migration Status Codes sections in the Notes Migrator database. The Migration Status Codes section on the Required/Additional tab is the functional section. (16774)
- The "Past and Present Domino Domains" setting is limited to 255 characters. (18385)
- Separators, other than commas, in the list of Past and Present Domino Domains entered in the Email Repliability settings are not converted to commas. (39586)
- LDAP validation and processing will not complete if an AD Domain Controller GPO is set with "Domain controller: LDAP server signing requirements" set to "Require Signing". (40768)
- Calendar items created from migrated data will not be removed by the Remove Migrated Data function. (48487)

Notes Migrator.nsf\Message Templates

- The error message, "You do not have the permission to send the message on behalf of the specified user" appears when attempting to send a migrated draft message. (16636)
- When "receiving unencrypted mail, encrypt before storing in your mailfile:" is selected in the Person document (in the Domino Directory), the decrypt button will not decrypt these encrypted messages. Please refer to this Knowledge base article at <https://www.binarytree.com/support/search-knowledge-bases/> for a workaround. (16740)
- The contact count shown in the pop up message when the user clicks the sync contact button, counts the same entries multiple times if the contact is in multiple categories, giving the user the impression that they have more contacts in your mail file than they actually do. (16783)

Notes Migrator.nsf\Migration Profiles

- Attempting to Set Migration Profile when there are no documents selected, does not produce an error. (16642)
- Advanced settings in a Migration Profile disappear after Profile Refresh, if the profile is deleted from the UI, and not the back-end. The Advance Settings are still stored in the back-end, but are not displayed in the UI. To work around this issue, enter the missing values and resave the document. (16785)
- The skip folder functionality does not allow you to skip the "Sent" and "(\$Sent)" folder. (22574)
- The skip folder functionality does not allow you to skip the "Inbox" and "(\$Inbox)" folder. (22746)
- When modifying a Migration Profile's Migration Options, from the initially selected "Message of type" option with the 'Mail', 'Task', 'Calendar' or 'Contacts' checkboxes selected, to the "All message types" option, without unchecking the selected checkboxes, the migration will migrate the items which were initially selected, not all message types. The checkboxes must be unchecked prior to changing to the 'All message types' option. (45859)

Notes Migrator.nsf\Post-Migration Actions

- The "Set Reader Access for Users mailfile" does not properly report the success and failed to process correctly. (16599)
- The "Set Reader Access for User Mailfile" agent does not consistently uncheck the 'Write Public Documents' box. This will allow users to create documents in the Domino mail file after migration. (16760)
- The "Set Reader Access" post migration action incorrectly reports no success when agent completes. (16811)
- In hybrid Exchange installations, with both Office 365 and on-prem Exchange servers, delegation access can only be set for users on the same system. Office 365 users can set delegation access to the mailbox to other Office 365 users, but not to Exchange users. Exchange users can set delegation access to other Exchange accounts, but not to Office 365 users. Access delegation is not supported between Exchange on-prem users and Office 365 accounts. (16841)
- Migrated data does not get removed when using a date range. (29156)
- The Set Full Access button agent reports a PowerShell error when the Full Access delegation permissions are run on accounts that have been mail box enabled in Office 365 if there are two or more accounts that have the same Display Name attribute.

Error: The operation couldn't be performed because 'Account Name' matches multiple entries.

(40699)

Notes Migrator.nsf\Pre-Migration Actions

- A Mail Rules message doesn't show the Message Log under the Notes Migrator user document which prevents the migration administrator from verifying the rules message was sent to the selected user(s). (16640)
- When using the combined notification template for end users in the Notes Migrator database, there is no way to prevent execution alerts from being displayed to the end users. (16666)

- Unable to provision a user if any of the shortnames in the Notes Migrator person document are in firstname.lastname format, regardless of whether the value is single or multiple. (16746)
- CAS Server matching returns an erroneous message when it can't find a match for a user due to non-matching SMTP addresses between the source and destination objects. (16763)
- Verify Mail DB (Audit Mail file) does not support clustered mail servers. (16772)
- The Name Translation Table CSVDE matching option does not support the matching of the German ö (ö) character and Greek Alphabet characters (Έλληνες χρήστη). To work around this issue, use one of the other match options. (16788)
- Matching users by CSVDE is not supported for Office 365. (16789)
- Mail-in DB's or Rooms & Resources cannot be provisioned to Office 365. This must be manually performed. (16802)
- Set Full Admin access fails when the users name contains a "\$" character. (16805)
- Private folders are not included in the Pre-Migration Mail File Audit. (22747)

Notes Migrator.nsf\Progress Summary

- Scheduled migrations produced error in Notes status bar. (16667)

Rooms and Resources

- The database template specified in the Rooms & Resource settings must be present on the Target server specified in the same settings document, or an error will display that the database template cannot be found. (16508)
- Room and Resources don't display on a migrated calendar entry on the scheduling tab. (16606)
- If the Notes field "OrgRepeat" on the Rooms documents has a value, it will cause the Room to be migrated as a repeating event, instead of a mailbox. (16645)
- Leading and trailing spaces are trimmed in values of Room Label, Resource Label, Online Label, Location Detail Indicator, and Room Resource Separator Settings Fields. (16661)
- Modified reoccurring meetings in rooms and resources not migrating correctly. (16715)
- The meeting organizer is incorrect after the migration of a room calendar. The resource owner is listed as the meeting organizer instead of the actual meeting chair. (16753)
- The migration worker will crash if the Room Name begins with an asterisk. (16816)
- Room and Resources Migration will not load the worker on the controller if no other workers are registered. You will encounter the error: "C:\program files\binarytree\cmt for exchange\cmt_migrationworker.exe could not be started. Please confirm that CMT is Installed correctly and the settings doc reflects the correct install path." (28448)
- Room import fails when the room has quotes in the name. (38359)

To-Do Migration

- Completing a migrated Task will send a notification to the SendTo user when the Task is created using the "Copy into new..." button in Lotus Notes. No notification should be sent. (16598)
- Text bullets appear as asterisks ("*") post migration when viewed from Outlook Web Access (only). (16613)
- Embedded graphics in Lotus Notes Tasks are migrated as attachments. (16619)
- Lotus Notes Tasks created by a delegate appear in Outlook with the delegate as the Owner, instead of 'Delegate (Sent on behalf of mail file owner)'. (16621)
- Migrated Tasks containing Notes links have an extraneous .gif attachment for each link. (16622)
- Read/Unread status is not maintained on migrated Tasks when using Outlook Web Access. (16623)
- Unaccepted To Do notices in Lotus Notes do not migrate to Exchange. (16632)

- Repeating tasks (to-do's) do not migrate to the correct dates. (16693)
- Assigned Tasks (To-Do's) are migrated as Task calendar events, not as Task Requests. The migrated Task will only be displayed in the To-Do's not in the Inbox. (16697)
- Yearly and Custom recurring Tasks become Weekly Tasks after migration. (16702)
- When migrated assigned tasks are completed the person who created the task and assigned it to someone else does not get the notification that it was completed. (16706)
- A migrated task that had been created by "copying into new todo" from a received mail item incorrectly tries to send an email to the original addressee of the email that the task was created from when the task is completed. (16708)
- Some bullet types do not maintain the same format in migrated tasks. (16754)
- The Task Owner name displays the ExchangeLegacyDN rather than the Display Name. This is a cosmetic issue only and there is no loss in functionality. (46929)
- Task assignees (Required, Optional, FYI) are not migrated to Outlook. (46986)

About Binary Tree

Binary Tree is a Microsoft Gold Partner for messaging, cloud productivity and application development and is dedicated to and focused on enterprise transformations to Microsoft platforms. Since 1993, Binary Tree has transformed more than 8,000 global clients and 42 million users, including 7.5 million users to Office 365. The company is a globally preferred vendor for Office 365. Its headquarters is located outside of New York City with global offices in France, Germany, Singapore, Sweden and the U.K. Its award-winning software and services help companies modernize email, directories and applications by moving and integrating them to the Microsoft cloud. The company's business-first approach helps plan, move and manage the transformation process from end to end so that clients can stay focused on their core businesses. Binary Tree's experts deliver low-risk, successful IT transformations. Visit www.binarytree.com for more information.
