What's New in Version 1.4

Self-Service Archive Migrator | CMT 1.4 resolves several issues detailed below.

Release Notes 1.4

- A setting to automatically add the PST file as a folder to the user's mail profile immediately after migration has been added. If enabled, this setting eliminates the need for the user to manually open and add the PST file as a folder to their mail profile.

Also, a new setting to allow the administrator to use either the Exchange UPN or the Exchange Primary SMTP to find the correct profile to attach PST files to has been added. (39245)

- An issue where adding a mail archive over 4GB in size on the Archive Migration Selection screen caused a "File Not Found" error has been resolved. (41116)
- The option to use an existing translation file that has been delivered by another process to the client workstation has been added. (41849)
- To reduce the size of the file downloaded to the end user workstation, the option to include all name combinations or just the first canonical name found for the user in the translation file has been added. (54989)
- To resolve an issue where a too large (32k) error is displayed and migration cannot continue, an agent to export and clear the logs on the person documents is now available. (54991)
- To assist troubleshooting, the Autodiscover log is now included in the User Log Files. (54993)
- Self-Service Archive Migrator now supports the use of Notes Session variables to correctly identify the installation paths. (54995)
- Windows environment variables, such as %LocalAppData% and %AppData% can now be used when defining the destination folder for .pst files. (54996)
- To avoid increasing the size of the roaming profile, the temp directory has been moved to the Local App Data (%LocalAppData%) folder. (55062)
- The "Informational" log file logging level has been removed. (57079)

Previous Updates

The following previous updates are included in version 1.4:

1.3.1.3

- An issue where migrations to online archives failed if the user's UPN does not match the SMTP address has been resolved. PowerShell matching now includes the UPN, and it is displayed in the Exchange Settings section of the person document. (52917)

About Binary Tree

Binary Tree is a Microsoft Gold Partner for messaging, cloud productivity and application development and is dedicated to and focused on enterprise transformations to Microsoft platforms. Since 1993, Binary Tree has transformed more than 8,000 global clients and 42 million users, including 7.5 million users to Office 365. The company is a globally preferred vendor for Office 365. Its headquarters is located outside of New York City with global offices in France, Germany, Singapore, Sweden and the U.K. Its award-winning software and services help companies modernize email, directories and applications by moving and integrating them to the Microsoft cloud. The company's business-first approach helps plan, move and manage the transformation process from end to end so that clients can stay focused on their core businesses. Binary Tree's experts deliver low-risk, successful IT transformations. Visit www.binarytree.com for more information.
