

BINARY TREE®

Powering Enterprise Transformations®

Retire your unused Domino applications after archiving the content to Microsoft cloud storage.

APPLICATION ARCHIVING SOLUTION

Archive and Retire Legacy Domino Applications

According to Gartner, if you are like most organizations, more than 50% of your existing Notes/Domino applications “would be classified as fit for decommissioning.” Binary Tree’s Application Archiving solution can help you to archive your unused applications and accelerate your efforts to retire Domino. For Domino applications with aged data, our Application Archiving solution will help you retire application content to a client and server independent format. We include a solution to easily retrieve the archived data in a user-friendly format.

Extract

Extract your application content

— All content from each Domino database is extracted to a client and server independent format using our Application Transformation service

Store

Store the content in the cloud

— Binary Tree recommends storing data in SharePoint Online or in Azure Blob Storage

— Using Microsoft Cloud storage has the benefit of protecting the content of the stored archives using built-in security features and leveraging Active Directory authentication

Retrieve

View data in a familiar format

— Binary Tree’s archive retrieval tool provides a full-text search of the requested content

— Because we use a client and server independent storage format, the content can be easily read by an end-user in a web browser

— All rich-text, attachments and meta data are retained
