

BINARY TREE®

Powering Enterprise Transformations®

Providing a unified Global Address List (GAL) is a critical first step to enabling user collaboration across internal or external domains.

GLOBAL ADDRESS LIST SOLUTIONS

Create a Unified Global Address List for Cross-Domain Collaboration

When you undergo organizational and IT changes that impact your users like mergers or acquisitions, mail or directory migrations, or establishing business-to-business collaboration, you face both exciting and disruptive challenges. A primary goal for your IT team is to enable users in multiple directories, whether within one organization or across corporate boundaries, to collaborate while minimizing disruptions to their productivity. Providing a unified, cross-organizational Global Address List (GAL) is a critical first step to achieving robust collaboration.

Binary Tree provides multiple solutions for unifying Global Address Lists and synchronizing directories across internal or external domains. Choosing the right solution will depend upon your specific project requirements but they will all enable users to find each other in a common address list when they need to send emails, schedule meetings and work together using conferencing and other collaborative applications.

Business Benefits

- Create a unified organization with one common directory
- Make a unified brand to build connections across the new organization
- Save time by eliminating multiple directory searches
- Achieve unification on Day One of a merger or acquisition

IT Benefits

- Proven GAL history with many features and configurations
- Flexible for complex enterprise systems; scalable for all organizations
- Quickly resolve conflicts across users and distribution lists
- Easily import values to customize its matching and mapping
- Sync and migrate passwords

Binary Tree Directory Synchronization Software Solutions

Binary Tree currently provides two software products focused specifically for directory synchronization projects.

Power365® Directory Sync

Power365® Directory Sync is a Software-as-a-Service product that enables synchronizations between Active Directory environments, between Azure AD environments or even between Azure AD and Active Directory. As cloud-based software, Power365 Directory Sync can be set up in a single day to help establish Day 1 productivity and collaboration for mergers, acquisitions and organizations that need a unified Global Address List (GAL).

Directory Sync Pro

Directory Sync Pro helps organizations synchronize multiple instances of Active Directory or synchronize Active Directory with a Domino Directory. To start, the tool makes both directories aware of each other. It then synchronizes all mail-enabled objects— users, contacts, distribution lists, shared mailboxes, passwords and much more.

Other Binary Tree Software Solutions with Directory Synchronization Capabilities

Binary Tree provides five other software products that include directory synchronization capabilities in addition to other capabilities.

Power365® Active Directory

Power365® Active Directory is a SaaS solution that integrates and migrates on-premises, Azure cloud, and hybrid Active Directory environments without requiring trusts, SQL, network connectivity, or installing servers.

Active Directory Pro

The **Active Directory Pro** software is designed for Active Directory migrations as it lets you merge, consolidate, or restructure Active Directory environments. Automate your AD migration while keeping your migrated and un-migrated users, devices, and applications in sync.

Power365® Integration

Power365® Integration delivers the coexistence and synchronization you get with **Power365® Directory Sync**, along with the ability to migrate mail, public folders, SharePoint, OneDrive, Teams, and more. Power365 Integration automates the coordination between different Office 365 tenants with a unified address list and global access to calendar availability between organizations. Power365 Integration also orchestrates direct changes to local (on-premises) Active Directory users and mail-enabled groups to control mail routing before and after a mailbox migration.

Power365® Integration Pro

Power365® Integration Pro includes all the features of Power365 Integration and adds the ability to deliver a unified brand identity through an email rewrite service— on both inbound and outbound email—from different Office 365 tenants.

Notes Integration CMT

Notes Integration CMT integrates Domino with Exchange and/or Office 365 to enable migrated and non-migrated users to continue to collaborate during a migration.

THE BINARY TREE ADVANTAGE

- › Over 25 years of experience with migrations and transformations for enterprise organizations
- › Supported over 10,000 global organizations
- › Supported over 1,000 mergers, acquisitions and divestitures
- › Transformed over 50 percent of the Fortune 500
- › A Microsoft Gold Partner and a globally preferred vendor
- › 2020 Microsoft 365 Security Deployment Partner of the Year Finalist
- › 2014 Messaging Microsoft Partner of the Year
- › ISO 27001, 27018, Privacy Shield and Veracode certified, and GDPR compliant, for assurance of quality and security
